

Clinic expansion and first CT in the region! Vetzone and LuxVet raise standards in veterinary diagnostics in the region

Vetzone Spital Veterinar, a 24-hour clinic of the LuxVet Group in Constanta, is LuxVet's first investment of that magnitude in Romania. The expansion and renovation of floor space and acquisition of a CT scanner sit right at the heart of LuxVet's long-term strategy for elevating the standards of veterinary care in the region by investing in specialized, high-quality facilities.

The investment was planned to meet the long-term need of Vetzone for a broader scope of diagnostic services and highest-quality medical care that can be provided to patients locally. The project involved not only the purchase of a CT scanner but also a considerable expansion of floor space and overhaul of the clinic. Those efforts have effectively eliminated the need for owners to transport their animals to other cities. The new, state-of-the-art scanner allows veterinary doctors to perform scans faster and get more precise diagnoses.

"The hospital expansion was a very ambitious project that we delivered very efficiently in just 12 months. We gained nearly 150 sqm of additional floor space with elevator access, where we moved our main operating theater while also upgrading OR facilities. In addition, the purchase of the CT scanner was a pivotal point for Vetzone. Thanks to this modern, highly advanced equipment, we are able to diagnose emergency cases and fast-track diagnostics for more complex cases, including injuries, neurological and oncological conditions. We could not have done that without LuxVet's support. Our common focus is to offer patients in Romania the care and diagnostics at the highest standards available in veterinary medicine today," says Dr Laurentiu Leica, co-founder of VetZone.

"This is the first investment of this magnitude and complexity that the LuxVet Group has delivered in Romania and a strong boost for veterinary medicine in the region. Vetzone has become a centre for advanced, state-of-the art diagnostics, with a CT and 24-hour care delivered by a highly-qualified team that can make full use of the equipment to provide the highest-level care for pets. This project also embodies the essence of our philosophy of supporting the growth of the veterinary sector by improving standards and quality of care for our clients' pets. It is worth mentioning that these developments will save many customers several-hour trips to Bucharest. They can get the same type of diagnostics much faster right there in Constanta," adds Piotr Zajackowski, President of LuxVet.

CT scanning enables precise assessment of the musculoskeletal system, chest, abdominal cavity and nervous system, which allows for quick and accurate diagnosis of injuries, internal diseases and tumors, and planning of surgical procedures.

"The CT scanner is a powerful diagnostic tool that impacts the quality of medical care and outcomes, but it is just as important to provide the hospital team with adequate training and support in performing and interpreting high-quality scans. We feel that in this area we are also going to contribute to medical advances in Constanta and the vicinity. Our main goal is to encourage top veterinary experts in every medical specialty to join us to enable the transfer of knowledge and expertise within the veterinary community. In this case, we are very proud to have Dr Vlad Lupu, PhD supporting us in diagnostic imaging," continues Piotr Zajackowski.

Vetzone also has a modern operating room, a post-op oxygen chamber, an incubator, an imaging diagnostic room (X-ray and ultrasound) and a laboratory where most tests can be performed on-site. Being part of LuxVet gives the clinic access to training and know-how exchange for the team. Vetzone is the perfect example of LuxVet's long-term strategy of advancing veterinary medicine in Romania by investing in local clinics and supporting the dreams of top authority figures in the veterinary sector.

About LuxVet

LuxVet is the leading veterinary platform in Central and Eastern Europe, bringing together around 70 clinics across the region. Since 2022, the Group has been actively consolidating the fragmented veterinary market and, thanks to rapid growth and a focused M&A strategy, has become the largest

veterinary platform in the region. Its expansion into new markets reflects the growing demand for high-quality veterinary services and supports the vision of building an international network of clinics and hospitals.

The company follows a partnership-based integration strategy, supporting clinics rather than imposing top-down structures. It invests heavily in teams, advanced equipment, and professional training. Nearly 1,000 veterinary professionals have already benefited from in-person and online learning, ensuring continuous development and knowledge exchange across the network.

The Group also operates Veterio in Warsaw, Poland, the first referral hospital of its kind in this part of Europe, equipped with cutting-edge diagnostic and imaging technology. It employs several board-certified specialists and expects to have around ten diplomates in the near future, further strengthening its expertise and ability to deliver world-class veterinary care.

With a clear focus on excellence, innovation, and education, LuxVet is helping shape the future of veterinary medicine in Central and Eastern Europe.
